TECHNOLOGIES

Anti-pickpocket protection system

Should the BlueWatchDog card travel outside the protection radius, an alert is sent to your mobile phone and a 100dB alarm on the card is automatically triggered.

Designed to provide practical, effective protection for your valuables when you are on the go, BlueWatchDog is the world's only alarm system that works with your mobile phone's Bluetooth capabilities, so you can react in case of theft.

Your valuables are protected and cannot be removed from your vicinity without your awareness.

BlueWatchDog is a credit card-sized device with multiple uses, from protecting your notebook, wallet, or luggage to keeping a close watch over people – such as your children.

User-adjustable security levels make it possible to program this innovative product for use as either a silent alert or as a theft deterrent device.

This worldwide first, manufactured in Switzerland and covered by an international patent, is the product of peerless quality and knowhow, making it reliable for both personal and business uses.

The BlueWatchDog may be configured to provide protection for distances ranging from 5 – 30 metres.

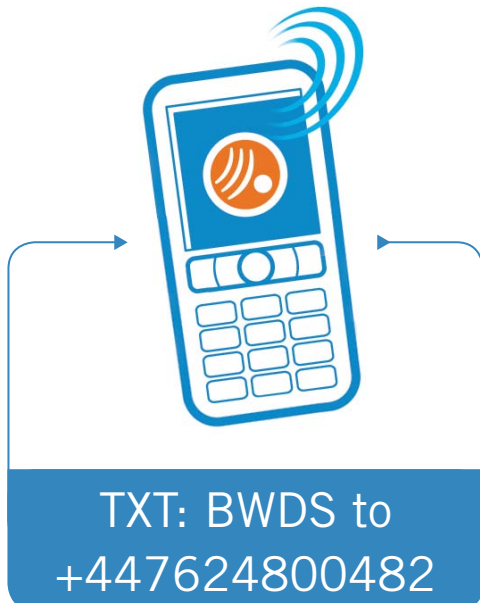

If the protection radius is exceeded, the user receives an alert on his mobile phone and the 100dB alarm on the card is automatically triggered in order to protect the valuables.

The device is provided with a power cable for recharging via USB port on a computer and with a USB travel charger.
